

A NEW EXPERIENCE FOR HOSPITALITY BUILDINGS

HOTEL ROOM AUTOMATION

THE GLOBAL SPECIALIST
IN ELECTRICAL AND DIGITAL BUILDING INFRASTRUCTURES

 **legrand**[®]

LEGRAND GUEST ROOM **AUTOMATION**

Wherever you want to improve customer comfort or make work and management easier for hotel operators, Legrand has solutions for guest rooms.

The Guest Room Automation system is an integrated approach which means everything in the guest room is interconnected.

IP SCENARIO MODULE
TO MANAGE THE DIFFERENT
HOSPITALITY REQUESTS

GUEST ROOM AUTOMATION

With the IP scenario module, different scenarios can be set in each guest room such as welcome scenario, leaving scenario, sleeping, etc., in order to adapt the lighting, temperature and curtains to each situation. The access control can be set and managed separately for each hotel area, to suit both guests and staff. Your guests live, it does the rest!

BUILDING MANAGEMENT

The Legrand supervision software, IP scenario module and SCS solutions allow to manage room and common areas of your building.

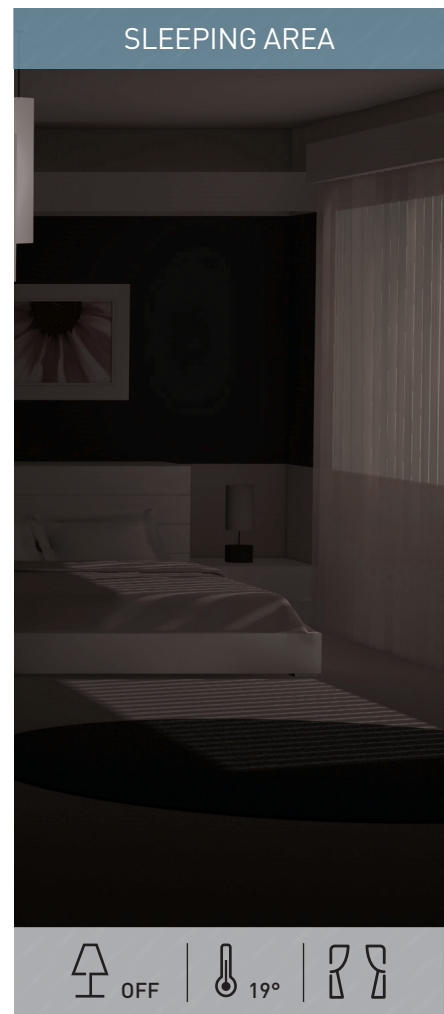

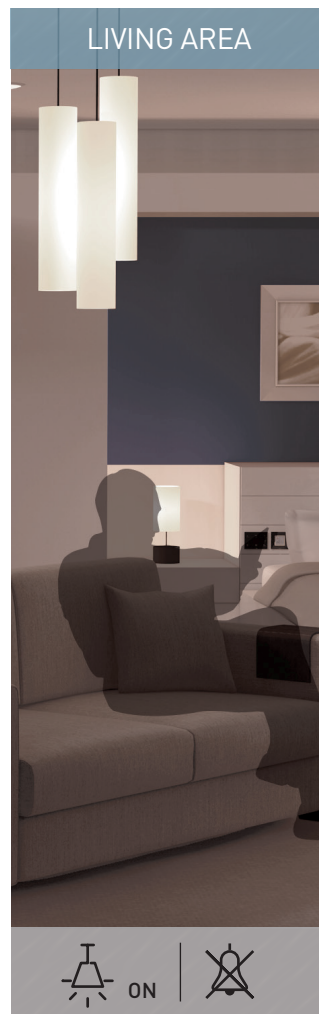

With Legrand's integrated solutions, you can reduce the capital expenditure and the operational expenses of your building.

SYSTEM INTEGRATION WITH LEGRAND OFFERS

The IP scenario module can be integrated with the global Legrand hospitality buildings solutions:

- All MyHOME Legrand wiring devices
- Building management system
- Lighting management system
- Access control system

...

INCREASE GUEST COMFORT FOR A NEW AND UNIQUE EXPERIENCE

Thanks to the Legrand IP scenario module, different scenes can be set in each guest room.

The objective is to consistently satisfy guests' needs and expectations in their rooms. They will appreciate the ability to control the lighting, the curtains, the temperature and the fan coil easily through the user friendly interfaces. The IP scenario module is the intelligence of the room: it centralizes information about room status, about accesses and it manages different scenarios.

DND-MUR external unit with bell ring and badge reader. Function will be visualized through LEDs on specific indicators. Includes a reader for access control.

Keycard switch with DND-MUR internal unit

DIGITAL THERMOSTAT
The new flush mounted thermostat enables easy control of temperature and fan speed. Equipped with back lighted display, you have access to information at every time.

8-push-button scene control

6-scene touch control

WELCOME SCENARIO

With the new DND-MUR external and internal unit solutions, guests are automatically made to feel welcome in the guest room. Comfort is provided by entry scenarios (temperature set, courtesy light), security and access control by the integrated reader DND-MUR external unit.

The keycard switch is a smart solution for powering the room and saving energy (temperature set, lights ON/OFF...). The new DND-MUR external unit can be customized with the room number and works as a bell ring.

COMFORT AND SLEEPING SCENARIOS

Guests have the possibility of controlling several living scenarios with keypad push buttons and touch control. Different scenes can be created in order to adapt the room atmosphere to specific situations, like watching TV, working, relaxing, etc.

This is possible with the reading scenario (turn light ON), TV scenario (suitable lighting to watch TV), sleeping scenario (lights OFF, curtains, temperature in eco-mode, DND ON) and other configurations... You can also customize symbols and locally create your own labels.

CONNECTIVITY FUNCTIONS

Legrand's solutions are designed to perfectly meet customer requirements for easy connection of multimedia and entertainment devices.

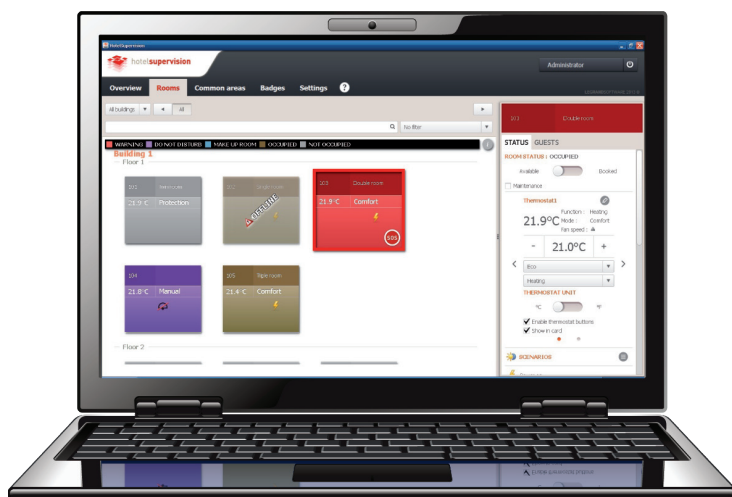

Audio and video socket (HDMI, RCA, 3.5 mm jack, RJ 45), double USB charging sockets (5 V - 1500 mA), multistandard shaver socket...

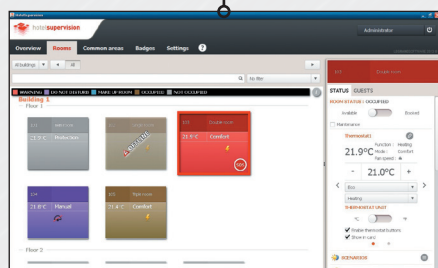

SUPERVISION AND MANAGEMENT OF GUEST ROOMS AND COMMON AREAS

The IP scenario module offers a fully integrated control and monitoring system for your hotel.

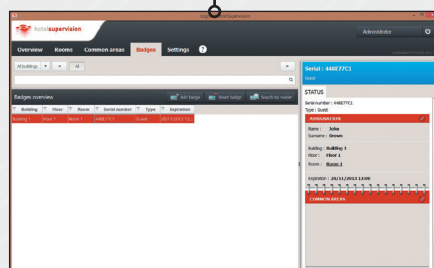

IP scenario module allows to supervise and control in real time the guest rooms and common areas status and interact with them. From the reception desk, you can monitor the temperature, lighting, ventilation and curtains independently in each room.

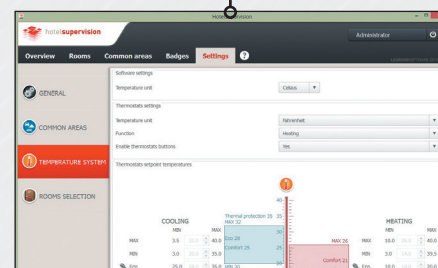

LEGRAND SUPERVISION SOFTWARE
Software for the supervision and programming of badges for access control can be directly downloaded through the following QR Code.

Supervision of hotel room status and basic management (scenarios, presence of guest, temperature control, etc.)

Programming of badges for access control.

Settings of rooms and common areas.

SUPERVISION AND MANAGEMENT OF YOUR HOTEL

The quality of service is a key factor in customer experience and satisfaction. With the Legrand IP scenario module, the staff can monitor guest room status and adapt room settings depending on the guests' requests in order to provide the highest levels of comfort and energy saving.

Through the supervision software, you can not only see the guests' requests, such as 'Do not Disturb' and 'Make Up Room', but also use the Main User Interface to change

the temperature mode (comfort, eco, etc.), control room scenes and view room information (windows open, guest present, etc.).

It is possible to configure settings for common areas (restaurant, garage, etc.) and to programme badges for access control of different areas for different people.

A complete Legrand system for your hospitality building from reception desk management to guest room comfort.
